SP-15 OFFSET PRINTER

Your solution to printing on uneven, convoluted surfaces.

The SP-15 is similar in design to our SP-10 direct contact printer. The print wheel, rather than printing directly on the product, transfers ink to a rubber roll that conforms to the product providing a clear legible print. Ideal for printing on irregularly shaped cable jackets, braided wire, smooth and dimpled hose, tubing and extruded profiles.

Advantages:

- Ink colors that are simple to change
- Font styles available that let you "customize" your product
- Exceptional print quality
- Easy setup with little down time
- Timing belt synchronization that is self adjusting

Added feature:

Do you already have a direct contact printer? It's not a problem. Optional attachment allows you to run your direct contact concave and flat wheels on this machine.

PRODUCT SIZES

Round material: 1/32" to 2" diameter; Flat material: to 1-1/4" wide

WHEEL SIZES

Industry standard "right reading" flat printing wheels (available at W. Gillies)

PRINT TYPES

Characters, numbers, stripes, hash marks and custom logos available

PRINT SPEEDS

Dependent on product size and configuration: generally up to 600 fpm

PRINTING INKS

Custom blended in a variety of colors for both hot and cold applications
